Renewable Energy

## OUR SUSTAINABLE ENVIRONMENTAL POLICY

As one of the leading companies in Turkey's energy sector, IC Enterra Renewable Energy follows a sustainable environmental management policy based on national environmental legislation, relevant environmental standards, and the best available technologies in the field.

The foundation of this policy is built upon the following principles:

- To comply with Turkish Environmental Legislation and other relevant legal provisions, and to implement international standards and best practices during the construction, operation, and closure phases of projects that are either in the planning or operational stages,
- To select and continuously improve environmentally friendly production technologies by prioritizing sustainability policies over the high initial investment costs in order to minimize potential environmental and social risks arising from our activities,
- To ensure pollution prevention by reducing pollution at its source, and to minimize waste generation through sustainable waste management practices including reuse, recycling, recovery, and disposal of waste,
- To create and enhance sustainable environmental awareness among all our employees through training, and to spread environmental and social responsibility awareness among our subcontractors and suppliers as well,
- To work towards the protection of natural resources and ecological species with a sustainability approach, to prepare annual afforestation plans within a budgeted framework, and to take the necessary actions accordingly,
- To reduce CO<sub>2</sub> emissions arising from production and services,
- To effectively implement Management Systems and systematically conduct environmental analyses within this scope,
- To continuously improve and develop sustainability practices by reviewing all phases of our activities,
- To reduce the water and carbon footprints resulting from all our operations,
- To implement a Zero Waste Management System in our activities,
- To adopt international standards, widely accepted initiatives, and local initiatives related to water as guiding principles,
- To transparently share sustainable environmental policy practices with stakeholders.
